INTERPRETATION

Elevated HbA1c (6.8%) consistent with diabetes mellitus (ADA threshold >= 6.5%). Fasting glucose also elevated at 112 mg/dL.

Recommend diabetology referral for initiation of therapy and dietary counseling.

Dyslipidemia with significantly elevated LDL (156 mg/dL) and triglycerides (180 mg/dL). Combined with diabetes diagnosis, cardiovascular risk is elevated. Consider statin therapy per ACC/AHA guidelines.

Renal and hepatic panels within normal limits.
